Status of Active Proposals to Develop New and to Revise Existing 3-A Standards and Accepted Practices

**Important Note:** All proposals approved for referral to the Working Group are assigned a proposal number. Previously, proposals were given a “T” prefix to indicate that this proposal is “tentative.” New revision proposals drafted in a “B Level” format (normative reference to 3-A Sanitary Standard for General Requirements, 00-) are assigned a “B” prefix.

March 9, 2020

This chart lists projects the 3-A SSI Working Groups are currently undertaking. It is updated on a routine basis. If a project has more than six months without any activity it is subject to removal from this chart.

Working Group Priorities—the following are the priorities of the Working Groups in developing new and revising existing 3-A Standards and Accepted Practices:

1. 3-A Standards and Accepted Practice “B Level” revision projects formatted with normative reference to 3-A Sanitary Standard for General Requirements, 00-
2. Requests for new or revision of existing Standards and Accepted Practices approved by the Steering Committee.
3. Those Standards and Accepted Practices more than five years old, not in the above two categories. (Procedures state that these have to be reviewed for date relevance and revised if determined they are out of date.)

* Indicates the Standard/Accepted Practice has been converted to “B Level” Format using the General Requirements Standard as the normative reference.
IMPORTANT NOTE: 3-A Sanitary Standards, Inc. (3-A SSI) has moved to an “A- and B-level” document hierarchy. In January, 2011 the decision was made to discontinue Version 5 of the Format & Style Manual and move to developing the “A-Level- General Requirements Standard.”

With an A/B level standards system, the general overall equipment sanitary requirements are contained in a master, or base, “A-level” General Requirements Standard. The technical requirements unique to the specific equipment within the scope of the standard are contained in the “B-level” Standard. (Each specific 3-A SSI equipment Standard has contained both the general and specific requirements before embracing the A- B-level methodology.) The decision was made to adopt this new A/B level format in order to streamline the revision and maintenance process.

3-A SSI developed the “A-level” Standard as an American National Standard to give greater credibility, recognition across multiple industries (ones where such Standards may not be available to further the public health), and to allow others to participate who normally would not be reached.

| #2: Fillers   | A. 17-12 Formers, Fillers, and Sealers of Containers for Fluid Products | B-17-12-A Fluid and Viscous Products: Frank DiMattei Osgood Industries frank.dimattei@bosch.com | B-17-12-A Fluid and Viscous Products: At the 2014 Annual Meeting, Members decided to retract B-106-00 proposed document which was a draft combined 17-11 and 23-06 document and agreed that the best option would be to revise 17-11 and 23-06 standards independently and in parallel revise these documents separately using a B Level Guidance Document Revision (B-17-11-A and B-23-06-A). B-Level draft B-23-06-A Equipment for Packaging Viscous Products has been added to B-17-12-A. Webinar Sessions have produced a final draft for Original WG Ballot. Original WG Ballot was successful with one negative for resolution. WG Chair and Document Leader completed resolution of comment and Original SC Ballot was successful, comments resolved leading to a WG B Recirculated Ballot to close 3/13/20. |
